Konnekt 8

TC Electronic Releases Konnekt 8 Audio Interface

Risskov, Denmark – 19 October 2006 – TC Electronic announces that its audio interface Konnekt 8 is now shipping. The audio interface provides recording and performing musicians with the highest possible sound quality from input to the recording application. Konnekt 8 features 2 IMPACT™ mic preamps, which are switchable to dedicated Hi-Z guitar inputs or balanced line inputs, 2 analog controlled balanced outputs, 2 AUX line in to monitor external devices, 2 coaxial S/PDIF (stereo) I/O, sample accurate MIDI and FireWire connectivity. The state-of-the art design allows the unit to be used as a stand-alone mixer with the front panel light ring providing easy access, instant control and visual feedback of important mix parameters. Konnekt 8 includes Cubase LE to allow users to start recording right out of the box. Konnekt 8 retails for EUR 320 ex. VAT.

Konnekt 8 has a number of innovative features that transcend the conventional way of thinking about audio interfaces. TC NEAR™ (Network Expandable Audio Recording) makes it possible to stack up to four Konnekts together to obtain a massive amount of I/O. Not only can multiple devices be connected to the computer, but two musicians each with a networked Konnekt 8 can direct monitor each other in real time. Users working with active monitors will appreciate the analog volume control that ensures an extremely low noise floor. Other monitoring options include two headphone outputs, one with a speaker muting function that mutes the speaker automatically when the headphone jack is plugged in.

The Konnekt 8 audio interface is based on the new DICE II digital interface chip from TC Applied Technologies. DICE II provides a very stable clock rate, crucial to digital sound quality and it ensures digital signal integrity using patent-pending Jitter Elimination Technology (JET™). Konnekt 8 also includes low latency drivers for Mac

TC Electronic was founded in 1976 with the objective of developing, manufacturing and marketing first class audio products that provide lasting user value for audio professionals and musicians. Today, the company is not only a leader in digital signal processing, but also a major player in other aspects of the digital audio technology world, such as digital amplification and networking. Furthermore, TC Electronic has become the Digital Technology Center of TC Group. TC users include some of the most demanding customers in pro audio, e.g. top artists, world class recording studios, the largest TV and radio stations, the most prominent theaters, operas and other installations and public address companies.
